GOLFIT!

Group: Sultans of Swing

Tamer, Demian, Anton, Constantin

GAME OUTLINE & OBJECTIVES

GOLFIT! is a real-time multiplayer arcade minigolf game where all players compete simultaneously unlike traditional turn-based golf, there is no waiting. Everybody plays at the same time.

The unique hook: Interactive map environments that players can trigger to sabotage opponents or secure advantages.

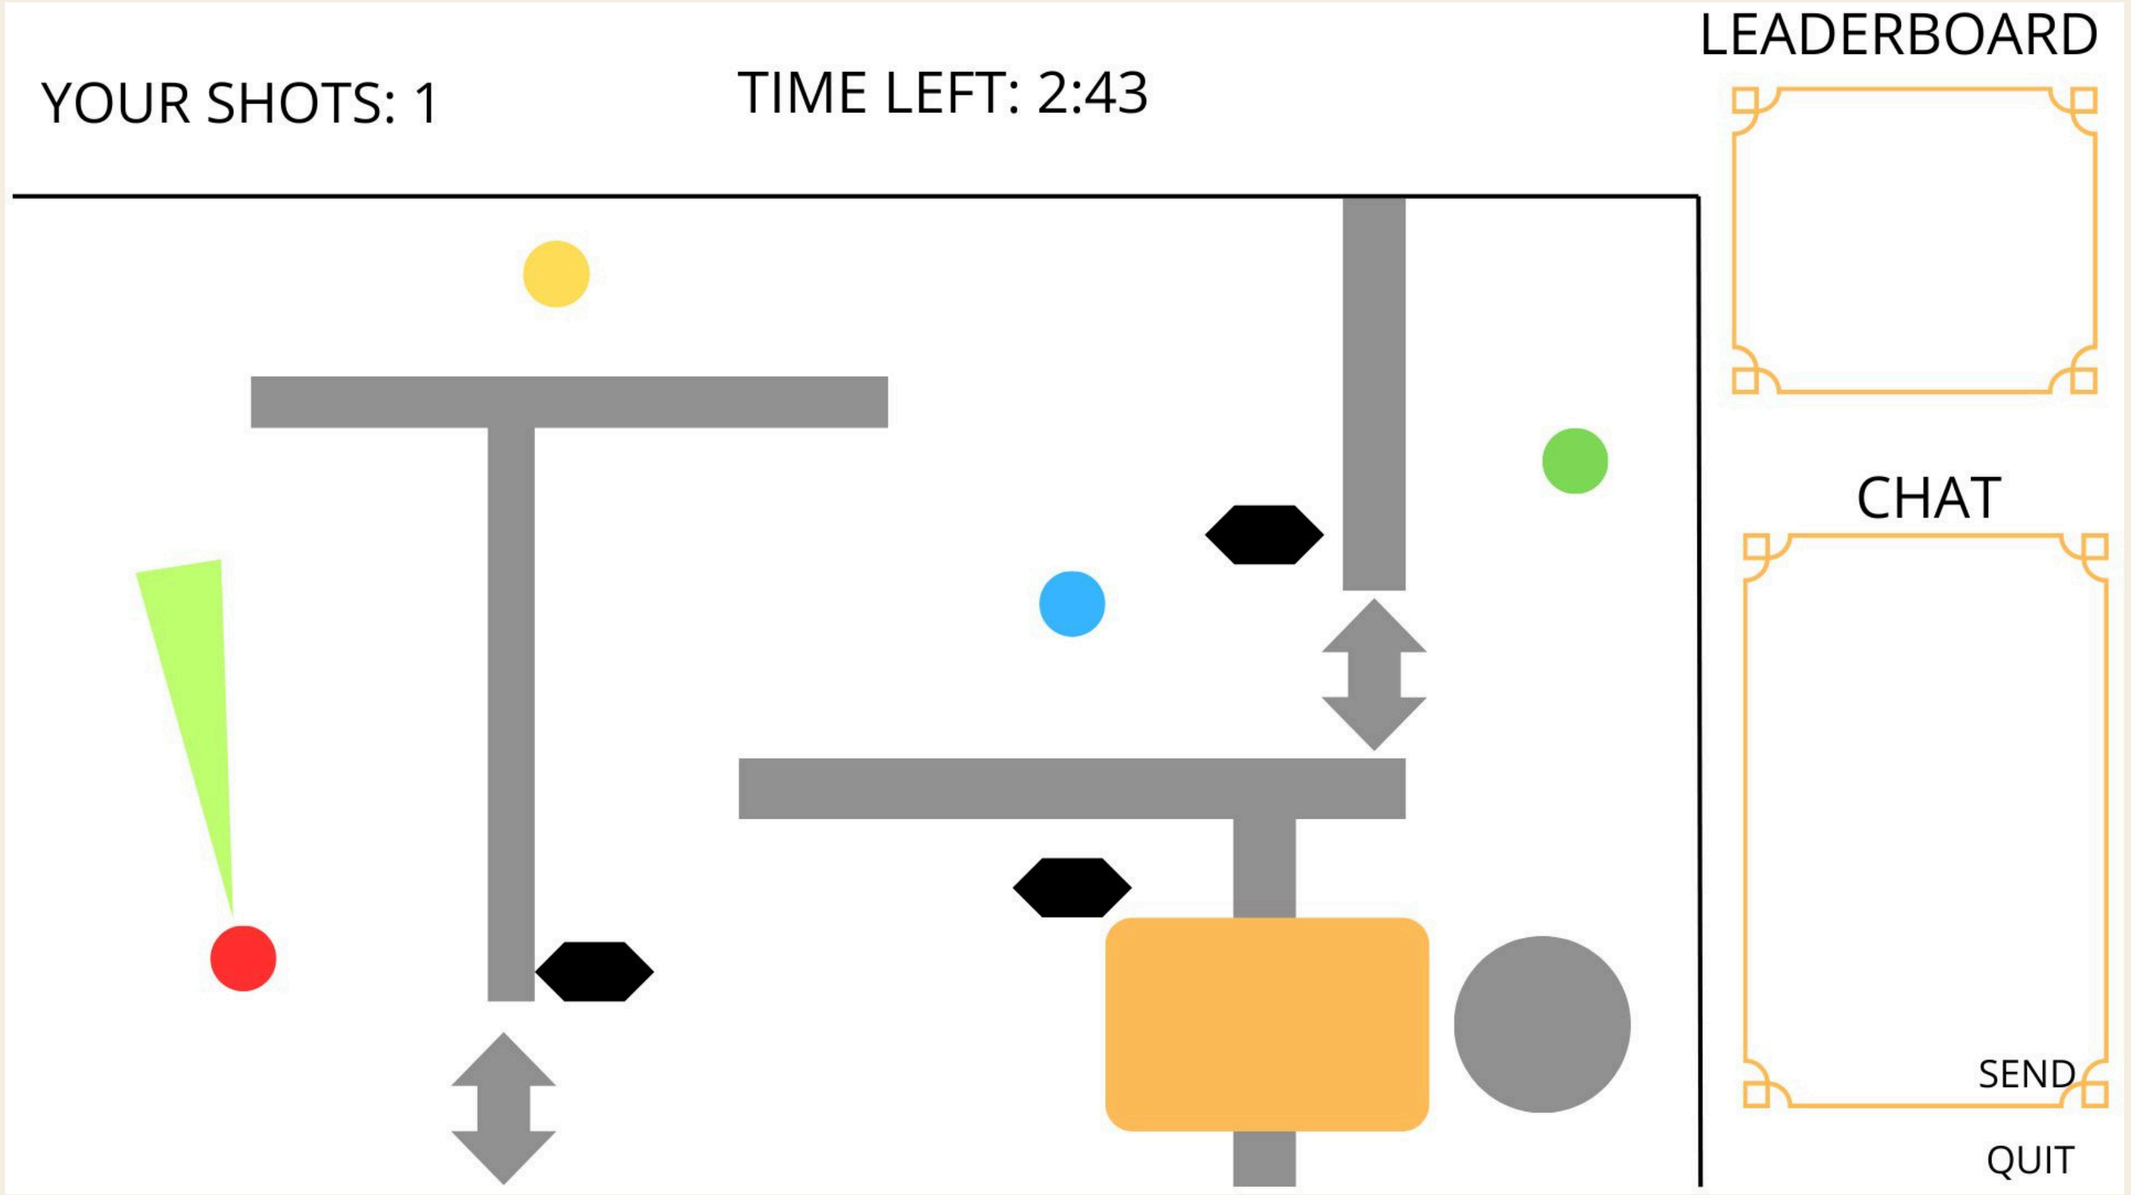

Primary Objectives

- **Sink your ball in the hole** using the lowest number of strokes possible
- **Win the match** by having the lowest cumulative score across all rounds
- **Avoid DNF penalties** (Did Not Finish) by completing holes within the time and stroke limits

GAME RULES & CORE MECHANICS

- How It Works
  - All players spawn simultaneously with uniquely colored balls
  - Continuous play—no turns. Kick immediately after your ball stops
  - Balls bounce off walls based on real physics; falling off the map resets with a one-stroke penalty
- Player Actions
  - **Click and drag** on your ball to aim and set power (green to red power bar)
  - Arrow overlay shows your projected trajectory before each shot
- Environmental Interaction
  - **Trigger buttons** activate when balls roll over them

MOCKUP 1

OUR ARCHITECTURE

Server:

- processes requests from client
- uses our network protocol
- sends authoritative game state
- runs game logic

Client:

- runs GUI
- receives game state from server
- lets user aim and charge the ball

REQUIREMENT ANALYSIS: OVERVIEW – FUNCTIONAL

Server must:

- validate and respond to requests
- manage and broadcast game state
- manage lobbies and chat

Client must:

- handle server connection
- provide gameplay interaction
- provide lobbies/chat interface

REQUIREMENT ANALYSIS: OVERVIEW - NON FUNCTIONAL

Our software must:

- support 50 concurrent users
- broadcast game within 200ms
- run at 30+ FPS
- show must go on
- clear labels, icons and intuitive controls

GOAL OF PROJECT

Fully functional, multiplayer 2D golf game with interactive environmental changes

MILESTONES

Week 3

Focus on skeleton and groundwork of game

Week 4

Ball mechanics

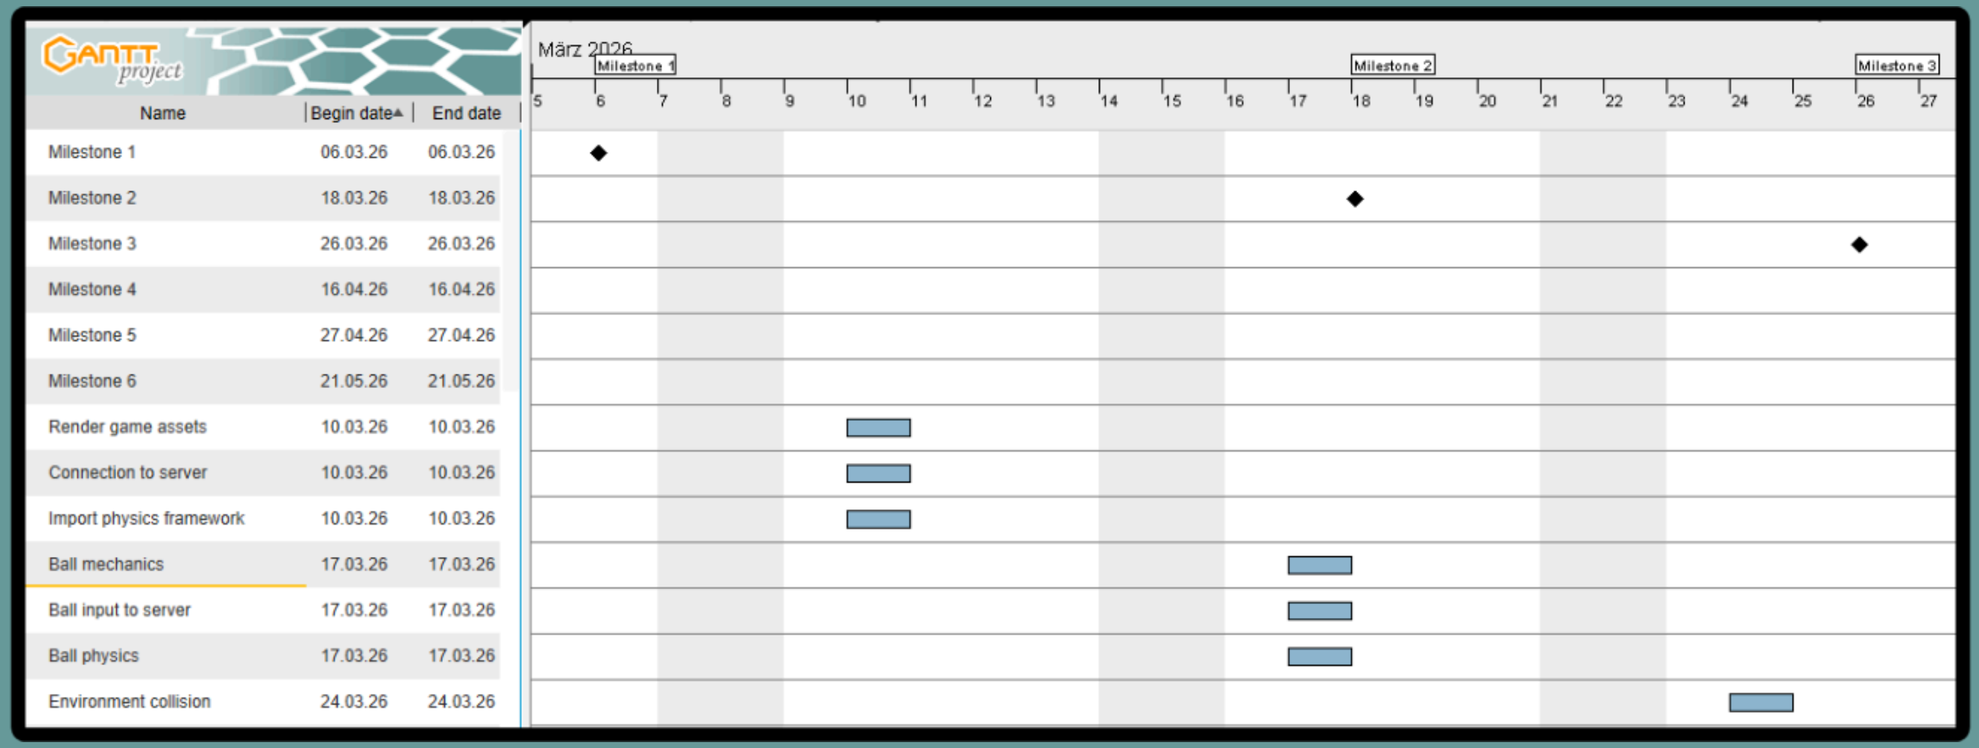

Week 5

Environment and map

Week 6

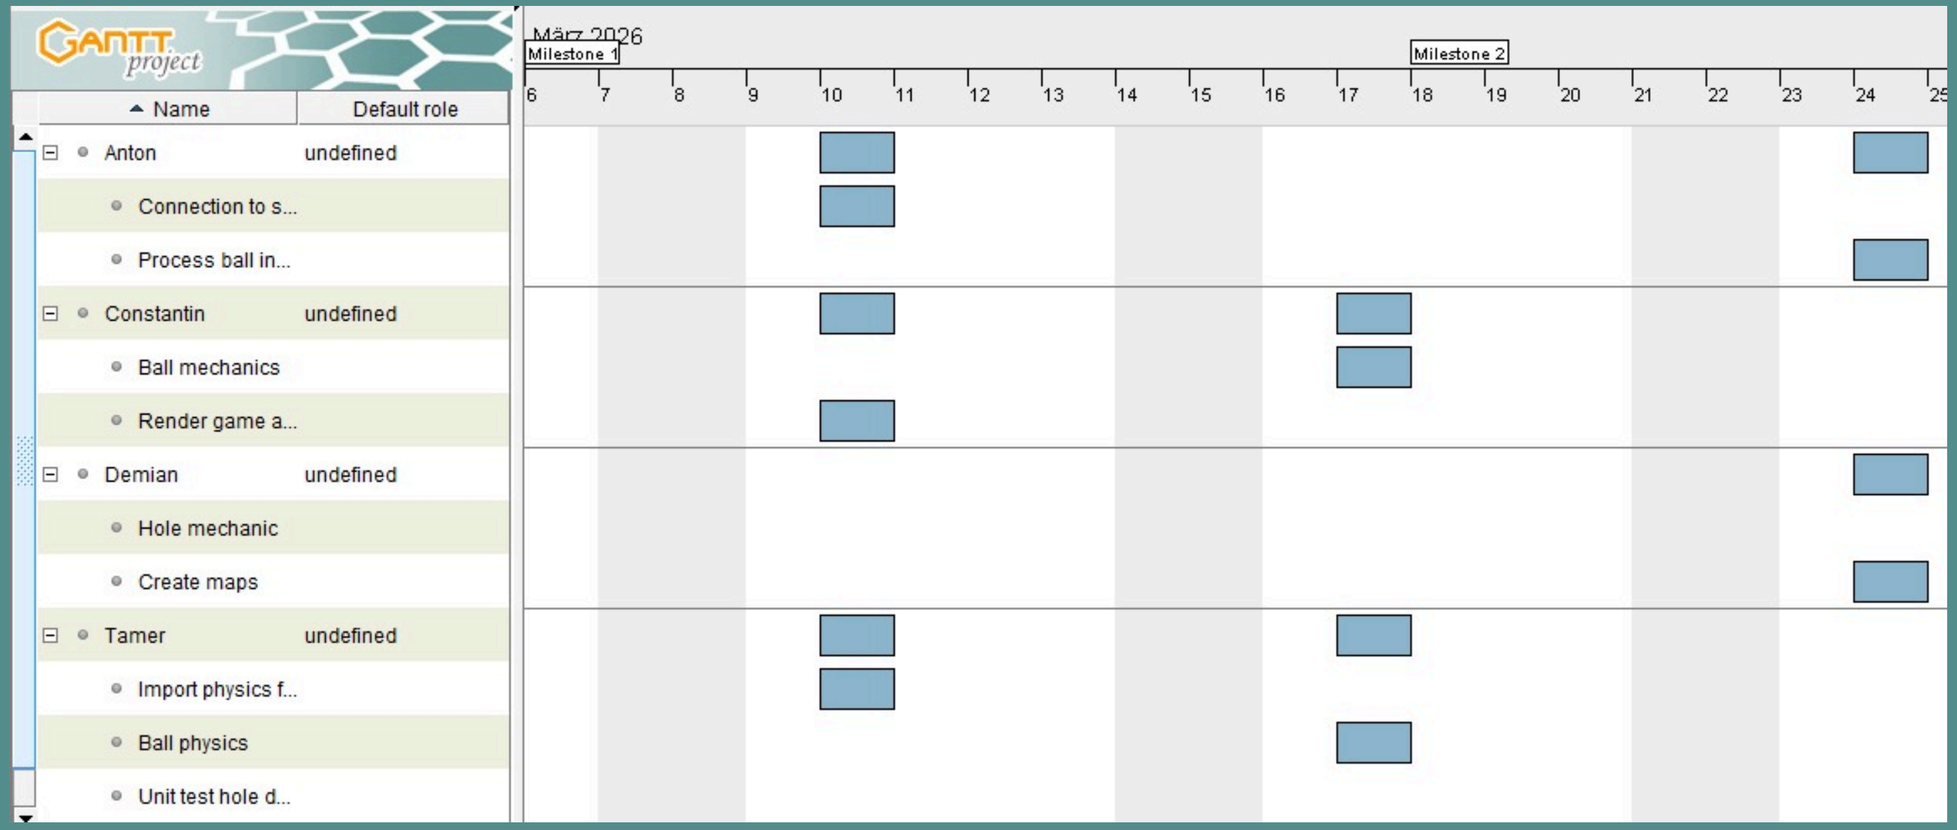

Hole mechanic

PROJECT TIMELINE

PACKAGES: JAVAFX, JUNIT, LOG4J 2

ROLES AND RESPONSIBILITIES

ORGANISATION

Communication tools

-Group call on demand

-Diary entry after work

-Flexibility

-Ahead of schedule
